*Re: Revision of Part 15 of the Commission's Rules to Permit Unlicensed
National Information Infrastructure (U-NII) Devices in the 5 GHz Band,
ET Docket No. 13-49*

Comments in Support of Petition for Reconsideration of WISPA, Cambium, Mimosa Networks and JAB

Dear Ms. Dortch,

I would like to file a comment regarding the changes made to Section 15.407. While I fully understand the FCC's direction with keeping tighter out-of-band emission requirements for the 5.8GHz band the imposed restrictions would be detrimental to our business operations.

We service a rural community in south east Indiana whereby residents, businesses, schools, and some municipalities have little to no options for broadband connectivity. In order to provide those services, we rely on long distance 5.8GHz links to connect those entities. With additional restrictions in place, we would no longer be able to service those remote areas.

Acquiring new sites to build towers is not a feasible option. With zoning and permitting processes, land acquisition, tower construction, etc, I would not be able to recoup the costs to provide the same services that I do currently. Therefore, I would have to cancel services to those customers and possibly close my business due to the fact that most of my customer base is fed by these links.

I ask the FCC to reconsider this action and the ramifications that it has to my business and the wireless internet service provider industry.

Nick Riedman
